SUMMARY

CS + Business student and Data Engineer Intern at Munich Re working in Python, SQL, Databricks, and RAG architectures (LangChain, ChromaDB). Shipped a Genie space enabling natural-language analytics over a 516M-row insurance lakehouse delivering on 45 target KPIs and a production logging package adopted by 12% of new internal Python projects.

EDUCATION

Northeastern University

Boston, MA

B.S. Computer Science and Business Administration, expected May 2029 | GPA: 3.8/4.0

Sep 2025 – May 2029

Relevant Coursework: Intro to Databases, Program Design & Implementation I (Python), Program Design & Implementation II (Java/OOD), Financial Management, Profit Analysis for Managers and Advisors, Financial Accounting, Intro to Marketing

EXPERIENCE

Munich Re

Princeton, NJ

Data Engineer Intern

May 2026 – Aug 2026

- Built and deployed a Databricks Genie space enabling non-technical finance users to query a 516M-row insurance lakehouse in natural language; delivered on 45 target KPIs and outlined data-quality defects blocking an additional 33
- Reverse-engineered an acquisition's undocumented database using LLM-assisted column-name matching and value-overlap scoring to recreate ER diagrams; shipped findings as DBML schema files and a deployed Databricks visualization app for team-wide exploration
- Developed a production Python logging package routing structured logs to Azure Application Insights and Databricks Delta tables; published via JFrog Artifactory and adopted by 12% of new internal Python projects, improving observability for data pipelines
- Forked and extended an open-source coding agent (OpenCode) to authenticate against the firm's internal LLM gateway, giving select engineers experimental agentic coding capability; presented in a team demo to management assessing developer workflow improvements

Northeastern Disrupt

Boston, MA

Quant Team

Jan 2026 – Present

- Implemented and backtested statistical-arbitrage models in Python using cointegration analysis to identify mean-reverting spreads
- Researched and simulated derivatives strategies (IV–RV arbitrage via credit spreads) in a paper-trading portfolio with a team of analysts

Oasis at Northeastern

Boston, MA

Software Developer

Jan 2026 – Apr 2026

- Architected backend and REST APIs for a study-abroad review platform (Node.js, MongoDB); implemented user authentication, search, and review endpoints on a 5-person team

Starbucks

Ellington, CT

Barista

Oct 2024 – Aug 2025

- Crafted specialty espresso drinks, blended beverages, teas, and food items in a high-volume cafe and drive-thru store
- Trained 4 new baristas on bar standards and workflows for a new store opening

PROJECTS

Agentic Financial Document RAG | Python, LangChain, HuggingFace, ChromaDB

Dec 2025

- Built an agentic RAG system for financial documents (Form 10-K, DEF 14A) with function-calling and multi-step reasoning to route queries and analyze retrieved data
- Designed a ChromaDB + HuggingFace-embeddings vector store for fast chunk retrieval, with strict retrieval guardrails to prevent LLM hallucinations

PROGRAMMING SKILLS

Languages: Python, SQL, Java, JavaScript, TypeScript, HTML/CSS

Data & ML: Pandas, Apache Spark, Databricks, LangChain, HuggingFace, ChromaDB, Matplotlib, Power BI

Web: React, Next.js, Node.js, Django, REST APIs, MongoDB

Tools & Cloud: Git, GitHub, Docker, Azure, Azure DevOps, VS Code, PyCharm, IntelliJ, DataGrip

Certifications: FINRA Securities Industry Essentials (SIE)
