

The SF starter kit: beans, AirPods, a five, a startup crewneck.

SAN FRANCISCO

MicroclimateFW'26

San Francisco can hold five kinds of weather in one afternoon. Fog in the west, sun in the Mission, wind at the top of every hill.

The people here build things for a living. Their mornings are slow on purpose: a pour-over, a walk uphill. Their days are fast: stand-ups, demos, shipping. Microclimate is dressed for both. Pieces that add and subtract as you cross the city, designed the way everything here is designed, around the person using it.

Karl
fog grey

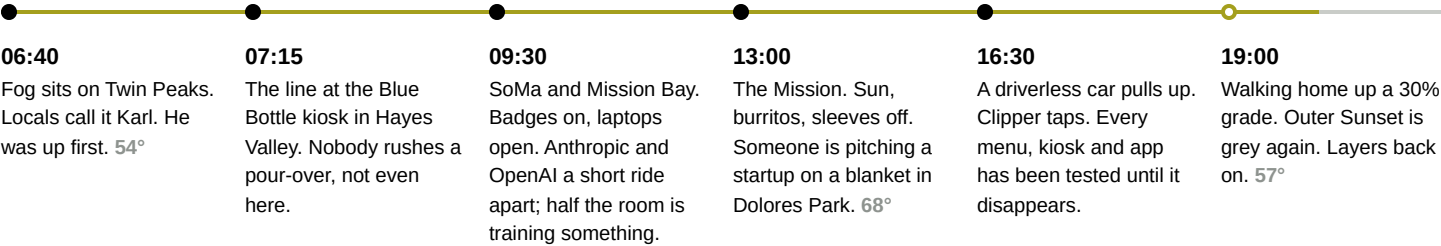

Roast
light-city brown

Ink
core

Olive
NU/VU mark

Bridge
accent,
sparingly

The system One weekday, crossing the city. Nothing here is finished; it just keeps loading.

Three pieces

Karl Shell
Water-resistant nylon, zip-out quilted liner. Fog grey.

Named for the fog. The sleeves detach along the dashed seam, so the jacket leaves the Sunset a shell and reaches the Mission a vest.

The inside pocket bag is printed with five neighborhoods and their afternoon temperatures. One orange bartack at the hood, the bridge's color, the only thing loud enough to cut through fog.

Pour-Over Overshirt
Heavy cotton twill, garment-dyed. Roast brown.

For the four minutes every morning the city agrees to slow down. Dyed and washed so it fades the way a filter does after a hundred brews.

One chest pocket sized for a phone and a Clipper card, nothing else. It is worn open over a hoodie in the office and buttoned up by the water at night.

Beta Hoodie
Heavyweight loopback cotton. Ink, olive stitching.

The builder's uniform, treated like a product. A stitched progress bar runs down the left sleeve and stops at 90%, because nothing here is ever done, only shipped. The hem label reads v0.9.

A badge loop at the hip. Every pull and tab works one-handed, without looking. Good UX, just in cotton.
